

Access

Leased Lines

easynet leased lines are reliable, cost effective and available nationally with a full service level guarantee and round-the-clock technical support to ensure maximum uptime.

easynet offers a full range of leased lines, from 64Kbps to 155Mbps, which provide a robust, scalable and affordable alternative to traditional Megastream and Kilostream style services and are supported by the **easynet** backbone network, which provides over 40 regional connection points.

The very high availability of leased lines enables you to guarantee on-line services, such as office mail and intranet applications for employees throughout your own corporate network. It can also enable ecommerce applications for your external customers, by providing fast and reliable access to web servers hosted on-site.

easynet offers both fixed bandwidth and variable bandwidth solutions. We also provide you with the facility to monitor line usage, which allows you to make informed decisions about your current connection and assists in planning for future requirements.

Service Benefits

Scalable bandwidth

easynet leased lines are easily upgraded to higher speeds, offering maximum flexibility.

Real-time reporting

Real-time usage statistics available to access online showing usage over the last day, month and year if required.

Service resilience

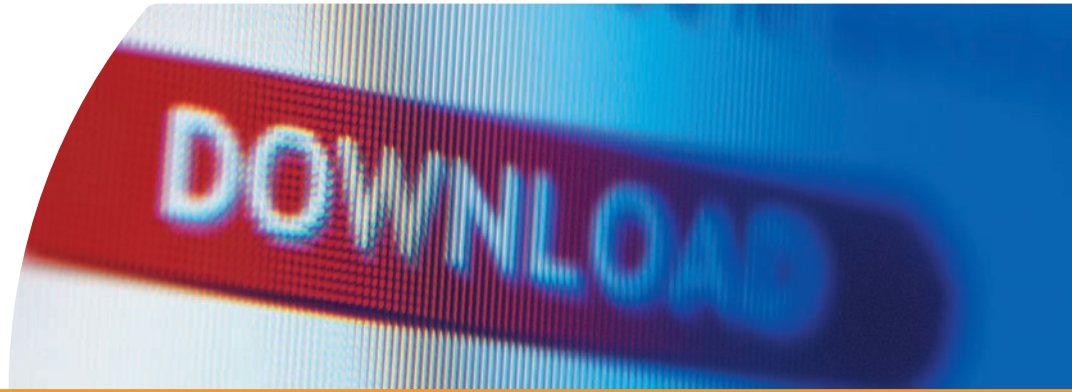

For mission-critical applications, **easynet** can deploy multiple lines and multiple routers for advanced redundancy and automatic fail-over for your connections. For standard applications, ISDN back-up can be deployed.

Network security

easynet provide a broad range of options to increase the integrity and security of your network, from content filtering to managed firewall and secure VPN configurations

Guaranteed availability

easynet monitors its leased lines 24 x 7, allowing us to proactively resolve potential issues, before they become service-affecting. **easynet** leased lines are backed by 24-hour technical support in case of any connectivity problems. A fully managed router is provided as part of the service, with next-day replacement cover, in the event of a fault.

easynet offers 64Kbps to 155Mbps leased lines throughout the country, and 100Mbps fixed connections at Telehouse London, Teleticity London and Teleticity Manchester. All our leased lines are 'clear bandwidth' guaranteeing no contention ratios, no multiplexing and no loss of performance due to other users. It is important to check this when comparing our lines against other companies' product offerings.

Fixed Bandwidth Leased Lines

For those currently using a 64Kbps or 128Kbps ISDN service, an **easynet** fixed bandwidth line is the ideal alternative for a cost-effective connection to the Internet for long periods. A fixed bandwidth line has a fixed annual charge and no transfer charges, allowing you to budget accurately for your Internet access charges.

Variable Bandwidth Leased Lines

easynet has continued to lead the market in high speed Internet connectivity. We were the first ISP to supply bandwidth-on-demand leased lines in the UK. This flexible and cost effective solution provides a high speed line that can be used and paid for as needed. For businesses that have a frequent, but not constant, requirement for high bandwidth, it is the ideal solution to meet 'bursting' requirements.

The charges for **easynet** bandwidth lines are based on total transfers in any one month, so you only pay for the bandwidth you use. Just choose your access speed, 2Mbps, 8Mbps, 10Mbps or 45Mbps, pay a fixed monthly fee and a variable charge according to usage.

If you are unsure as to your exact requirements and like the idea of a fully scalable solution then a bandwidth-on-demand leased line will provide all the speed you need.

easynet is one of the few ISP's who are able to offer a total solution for the supply of integrated telecommunications and Internet products and services.
