

## Hosting

# Corporate Web Space

**easynet** offers one of the most secure and advanced commercial web hosting facilities available, housed in our purpose-built data centres. Our secure, high performance web servers are protected by a comprehensive power back-up facility and are monitored 24 hours a day by our support department, ensuring that your website is readily available to your customers via **easynet's** secure core network. We look after your website, leaving you to look after your business.

### Product Options

All WWW space packages include an annual dial-up connection (ISDN/V.90) and domain registration or transfer. Both the Windows NT and UNIX packages are available with between 10 and 100Mbs of space.

To enable the correct choice of server for your web pages **easynet** offer Apache, Netscape and Microsoft web servers.

**easynet** customers have access to our public cgi-bin space where all common scripts required for a website are located. Typical scripts available include customisable forms, email scripts and website scripts. Any tested public domain script will be added to this area on request. This gives customers that require functions provided by "common" scripts access to a full cgi-bin development environment at no extra cost.

Please note: domain name registration/transfer and maintenance fees are included in our pricing. However, when registering a .com, .net or .org there is an additional and separate fee from Network Solutions of \$70 per two years. This fee is billed directly to the customer.

Sun Unix	Description
----------	-------------

\* Products listed include a .co.uk domain name and **easynet** Business Dial Account with full unified messaging

**easynet** also offer dedicated facility managed servers or co-location space plus racks and data suites of any size for integrated telecoms and Internet hosting solutions.

### **Unrestricted Bandwidth**

All **easynet** web servers are connected to the Internet at a speed of 100Mbps. This gives a guaranteed response to requests no matter how busy your server becomes. We can scale your connectivity to meet the specific requirements of your company ensuring you have the most cost-effective solution for your business.

### **Air Conditioning**

All **easynet** data centres are fully air conditioned, constantly maintaining the optimum operating temperatures for your server, ensuring maximum stability and reliability.

### **Full UPS and Power Backup**

In order to maintain a fully regulated power source to all servers a UPS (Uninterruptible Power Supply) is used in our server housing facilities. We also maintain our own back-up generator in the event of loss of power to our premises.

### **Industry Leading Firewall Protection**

We minimise the risk of a security breach by providing military standard firewall protection between your website and the Internet. This level of protection ensures that only your nominated administrator can access and change confidential information on our server.

**easynet** is one of the few ISP's who are able to offer a total solution for the supply of integrated telecommunications and Internet products and services.
